

# WIZ100SR

## Temperature Test Report

Report No.	<a href="#">WIZQA-0801-001</a>
Release Date	October 26, 2009
Test Model	WIZ100SR (Serial to Ethernet Gateway Module) <ul style="list-style-type: none"><li>- F/W : V3.9</li><li>- H/W : V1.0</li></ul>
Test Item	-30°C ~ 80°C High and Low Temperature Cyclic Test
Testing Equipment	<ul style="list-style-type: none"><li>- Constant Temp. &amp; Humid Chamber</li><li>- Compaq Presario B1800</li><li>- UTP Cable, Serial to USB Cable</li></ul>
Tester	Roy Yeo

## 1. Test Purpose

To ensure the performance and operation of WIZ100SR in the low and high temperature environment.

## 2. Test Configuration

### 1) System Configuration

### 2) Test Device & Tool

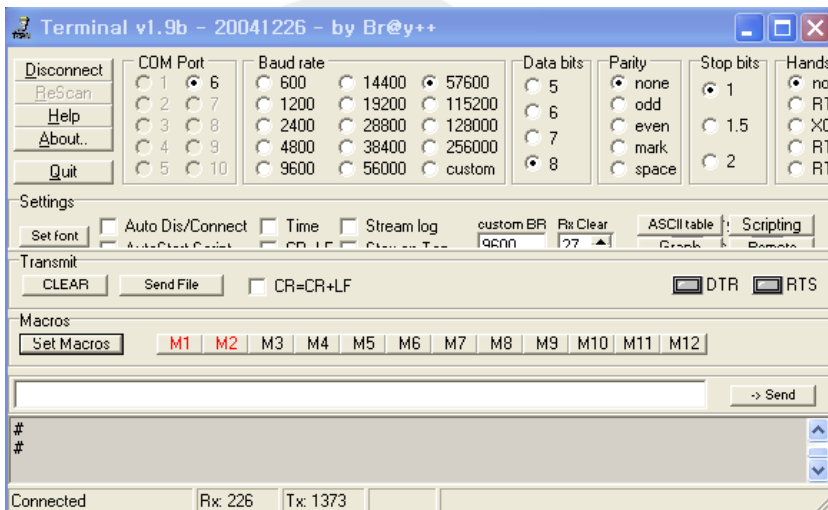

#### Hardware

	<p>WIZ100SR EVB (Serial to Ethernet Gateway Module)</p>
	<p>PC (Laptop Computer)</p>

	<p>Cables (RS232 Cable and Ethernet LAN Cable)</p>
	<p>Power Adaptor for WIZ100SR (5V, 2A)</p>

### Software

- Serial Terminal Program (Terminal V 1.9b) : To send serial data from PC to WIZ100SR

- Hyper Terminal Program : To receive the serial data from WIZ100SR to PC

- Auto Screen Capture 2

### Test Equipment

- Chamber Name : DAI SUNG ENGINEERING CO. TEMP. & HUMID CHAMBER

### 3) Test Condition

- Test Date : 2009-Oct-19 14:00 ~ 2009-10-22 19:00 (84 Hours)
- Test Quantity : 1 sets

### 3. Test Method

Between -30°C and 80°C, transmit the data from Serial to Ethernet. Observe the packet transmitting status.

1. Send serial data from Terminal Program to WIZ100SR and receive them from WIZ100SR to Hyper Terminal.
2. Capture the data transmission status every one minute by using Auto Screen Capture Program.

#### 4. Test Result

The test was passed as there was no packet loss or no error during testing.

Humidity	Temperature	Time	Pass/Fail
90%	25	1h	Pass
	25 -> 80	1h	Pass
	80	5h	Pass
	80 -> 25	1h	Pass
